

How to grow mushrooms with the [Solar-Dripper](#) ?

A new idea for gourmets:

- 1- Buy a bag of mycelium or a culture kit.
- 2- Make some openings in the bag.
- 3- Plant the Solar-Dripper plastic insertion cone.
- 4- Fill a bottle to 50 % with water.
- 5- Put in place with the regulator of the Solar-Dripper.

Precautions: There must be air in the bottle. Use a 500ml to 1L sparkling water bottle with a 28mm neck.

Temperature variations will cause small drip flows. You can also add water manually by pressing the bottle without crushing it.

* In tests, **750 grams** of oyster mushrooms grew in **5 days!**
